Oregon Sustainable Schools Initiative - High Performance School Committee

Personal Narrative:

With over 15 years of project experience in the U.S., New Zealand, and Malaysia, Katrina possesses extensive knowledge of high performance building design, as well as sustainability and urban design strategies. Her expertise lies in bio-climatic building and urban design strategies, ecologically sensitive planning and community design, and project management. Katrina applies her understanding of the LEED® rating system to projects ranging from new hospitals and schools to civic centers and higher educational facilities. She leads eco-charrettes, facilitates green building strategies workshops and LEED project design meetings, and research efforts in bio-climatic green building design, alternative technologies, green specifications and products. Katrina manages Green Building Services contracts with the USGBC to assist with LEED certification reviews, in addition to managing the LEED for Retail pilot program. As a member of the USGBC LEED for Schools Core Committee, she has been actively involved first-hand with the development of the LEED for New Construction Application Guide for Schools. She also developed and presents the LEED for Schools training module for the USGBC. She is a frequent speaker at national conferences, including the USGBC/Turner Green Schools Symposium, GreenBuild, EnvironDesign, Greening the Heartland, and numerous LEED workshops throughout the Pacific Northwest.
